LIMITED WARRANTY TERMS AND CONDITIONS

Product Limited Warranty

Trimble Navigation Limited ("Trimble") warrants that this product and its internal components (the "Product") shall be free from defects in materials and workmanship and will substantially conform to Trimble's applicable published specifications for the Product for a period of two (2) years, starting from the earlier of (i) the date of installation, or (ii) six (6) months from the date of original Product shipment from Trimble.

Product Software

Product software, whether built into hardware circuitry as firmware, provided as a standalone computer software product, embedded in flash memory, or stored on magnetic or other media, is licensed solely for use with or as an integral part of the Product and is not sold. If accompanied by a separate end user license agreement ("EULA"), use of any such software will be subject to the terms of such end user license agreement (including any differing limited warranty terms, exclusions, and limitations), which shall control over the terms and conditions set forth in this limited warranty.

Software Fixes

During the limited warranty period you will be entitled to receive such Fixes to the Product software that Trimble releases and makes commercially available and for which it does not charge separately, subject to the procedures for delivery to purchasers of Trimble products generally. If you have purchased the Product from an authorized Trimble dealer rather than from Trimble directly, Trimble may, at its option, forward the software Fix to the Trimble dealer for final distribution to you. Minor Updates, Major Upgrades, new products, or substantially new software releases, as identified by Trimble, are expressly excluded from this update process and limited warranty. Receipt of software Fixes or other enhancements shall not serve to extend the limited warranty period.

For purposes of this warranty the following definitions shall apply: (1) "Fix(es)" means an error correction or other update created to fix a previous software version that does not substantially conform to its Trimble specifications; (2) "Minor Update" occurs when enhancements are made to current features in a software program; and (3) "Major Upgrade" occurs when significant new features are added to software, or when a new product containing new features replaces the further development of a current product line. Trimble reserves the right to determine, in its sole discretion, what constitutes a Fix, Minor Update, or Major Upgrade.

Warranty Remedies

If the Trimble Product fails during the warranty period for reasons covered by this limited warranty and you notify Trimble of such failure during the warranty period, Trimble will repair OR replace the nonconforming Product with new, equivalent to new, or

price paid by you, at Trimble's option, upon your return of the Product in accordance with Trimble's product return procedures then in effect.

How to Obtain Warranty Service

Warranty Exclusions and Disclaimer

This Product limited warranty shall only apply in the event and to the extent that (a) the Product is properly and correctly installed, configured, interfaced, maintained, stored, and operated in accordance with Trimble's applicable operator's manual and specifications, and; (b) the Product is not modified or misused. This Product limited warranty shall not apply to, and Trimble shall not be responsible for, defects or performance problems resulting from (i) the combination or utilization of the Product with hardware or software products, information, data, systems, interfaces, or devices not made, supplied, or specified by Trimble; (ii) the operation of the Product under any specification other than, or in addition to, Trimble's standard specifications for its products; (iii) the unauthorized installation, modification, or use of the Product; (iv) damage caused by: accident, lightning or other electrical discharge, fresh or salt water immersion or spray (outside of Product specifications); or exposure to environmental conditions for which the Product is not intended; (v) normal wear and tear on consumable parts (e.g., batteries); or (vi) cosmetic damage. Trimble does not warrant or guarantee the results obtained through the use of the Product, or that software components will operate error free.

Cable Configuration Guidelines

In this chapter:

- [Multiple cables on single ports](#)
- [Cable/port compatibility table](#)
- [Superseded cables](#)

This chapter includes guidelines on cabling options for the FM-1000™ integrated display.

Multiple cables on single ports

Guidelines for configuring multiple cables on single ports.

- One communication type (that is, RS232 or CAN) can be used on each port. If two RS232 ports are required, the cabling should be configured to use port A and port B.

- The replicator port on most cables breaks away the pins not used by the primary device the cable was designed for. For example, if the RS232 port is required, the port replicator breaks out the CAN, digital pins, and so on. Do not connect the port replicator to the NavController II.

- Lightbars, the Field-IQ™ crop input control system, Tru Application Control™, the FieldLevel II system, the EZ-Steer® assisted steering system, yield monitoring and the EZ-Boom® automated application control system require their own dedicated CAN ports.
- The Autopilot™ automated steering system, the TrueTracker™ implement steering system, the EZ-Steer system, and radar output must be connected to port C or D.
- The Ag3000 modem can only be connected to port D.
- When using yield monitoring with CAN, only connect to port A.
- When using the LB25 lightbar and cable P/N 72420, you must use port B with internal termination.

Cable/port compatibility table

Use this table to confirm which FM-1000 integrated display cable can be used in each CAN port.

| Function | Communication type | Dedicated CAN port required? | Port A ① | Port B ② | Port C ③ | Port D ④ |

Superseded cables

Cable updates since the previous FM-1000 integrated display release are as follows:

| Original part number | Cable | Replacement part number |
|----------------------|--|-------------------------|
| 65522 | FM-1000 to NavController II cable with port replicator | 75741 |
| 67087 | FM-1000 to CAN cable with port replicator | 75407 |

Connecting the Display Only

In this chapter:

- [Standalone FM-1000 / WAAS / EGNOS / OmniSTAR XP/HP corrections](#)
- [Standalone FM-1000 / RTK corrections](#)

The FM-1000 integrated display can operate as a standalone guidance system, or you can connect it to a range of agricultural guidance devices to expand its functionality. This document shows you how to complete those cable connections.

To connect the display:

- as a standalone guidance system, see [Chapter 2](#).
- to the EZ-Steer assisted steering system, see [Chapter 3](#)
- to the Autopilot automated steering system, see [Chapter 4](#).
- to a Field-IQ crop input control system, see [Chapter 6](#).
- to the GreenSeeker system, see [Chapter 7](#).
- to the EZ-Boom 2010 automated application control system, see [Chapter 8](#).
- for radar output or serial control, see [Chapter 9](#).
- to the Tru Application Control system, see [Chapter 10](#).
- to external receivers (including the Ag3000, see [Chapter 11](#)).
- to yield monitoring systems, see [Chapter 12](#).
- to the FieldLevel II system, see [Chapter 14](#).
- to additional accessories, see [Chapter 16](#).
